

Donaldson Membranes — PERFORMANCE FABRICS

PTFE MEMBRANE TECHNOLOGY
WATERPROOF, BREATHABLE LAMINATES
FOR EXTREME WEATHER
PROTECTION

MAXIMIZE ADVENTURE – MINIMIZE DISCOMFORT

Our high performance fabrics made with Tetratex® PTFE laminates are lightweight, waterproof, wind-proof and breathable – perfect for active sports participants. Whether the wearer is skiing, hunting, fishing, boating, golfing, camping, hiking or biking, Tetratex PTFE laminates offer protection against:

- **Weather** – high performance even at extreme temperatures, high altitude and windy, snowy, wet and hazardous weather conditions (cold flex properties to -40°C)
- **Snow and rain** – the outer shell keeps water out while the moisture vapor transmission properties allow the wearer's body to naturally regulate
- **Water** – immersion garments are engineered to remain both breathable and waterproof when submerged
- **Snags, tears and punctures** – you can even specify a laminate that provides a barrier against the potential adversities of the outdoors

And Tetratex PTFE performance fabrics maximize comfort by offering:

- **Unsurpassed breathability** – unique bi-axial hydrophobic microstructures provide a high moisture vapor transmission rate that keeps the wearer dry in the most extreme conditions
- **Freedom of movement** – highly flexible, soft, drapable and lightweight
- **Durability** – retains its superior characteristics even after repeated washings; provides excellent abrasion resistance

ALL THESE BENEFITS
ADD UP TO BETTER
PERFORMANCE
AND HEIGHTENED
SAFETY AND
SATISFACTION.

Donaldson Membranes — PERFORMANCE FABRICS

Tetratex PTFE membrane 250x magnification

STATE-OF-THE-ART. STRONG. SOUND.

Tetratex PTFE laminate is a cost-effective solution that outperforms coated products and non-PTFE laminates. Manufactured from PTFE fluoropolymer resin, a Tetratex PTFE membrane contains millions of randomly connected fibers that render an effective pore size many times smaller than can be seen by the naked eye.

When the PTFE membrane is laminated to a fabric, the result is an extraordinarily breathable and waterproof product that allows body

vapors to pass through while protecting the wearer against wind, rain, snow and freezing temperatures. And it retains its superior characteristics even after repeat washings.

Engineered with the same technology that protects our service personnel in combat, Tetratex PTFE laminate will keep the wearer warm, dry and comfortable while making sure they always look great. We have met the needs of applications like:

- Alpine sports
- Biking garments
- Hiking
- Parkas
- Boating
- Single-wall tents
- Paddle sports
- Golf attire
- Camping
- Hunting

We place great emphasis on high quality manufacturing and customer service. We will gladly work with you to custom engineer just the right solution – picking and choosing from our menu of advanced technologies to meet your unique requirements.

Fabrics are sold in roll form in a wide variety of colors and weights to qualified manufacturers. Donaldson Membranes also supplies seam sealing tape custom engineered for each fabric to ensure waterproof and barrier protective properties.

ABOUT DONALDSON MEMBRANES, A DIVISION OF DONALDSON COMPANY, INC.

Donaldson Membranes offers technically superior, high quality PTFE membrane-based products. Founded in 1915, Donaldson Company is a technology-driven organization committed to solving customer needs through innovative research and development and superior customer service.

If you seek an extraordinarily waterproof, weatherproof and breathable product, demand Tetratex PTFE laminate.
