

Donaldson Membranes — PERFORMANCE FABRICS

PTFE MEMBRANE TECHNOLOGY
FOR SEAM SEALING TAPE

ENGINEERED TO BE DURABLE YET COMFORTABLE

Whether in the Military protecting one's country, a firefighter first on the scene, or heading to the slopes for snowboarding Maximum Protection, Quality and Comfort are all paramount. High performance fabrics made with Tetratex® PTFE laminates are guaranteed to be durably waterproof, breathable and of superior quality.

High performance Tetratex fabrics require high performance seam sealing tape. Donaldson custom engineers PTFE seam sealing tapes to be compatible with fabric laminates. Our seam sealing tapes, like our fabrics are engineered for life critical environments and will protect against the elements.

- **Weather** – tape designed to protect against the most extreme temperatures
- **Heat and fire** – tape designed to provide waterproof integrity under severe conditions
- **Water** – tape designed to be durably waterproof when submerged
- **Contaminants** – tape designed to provide the wearer with a superior barrier against chemicals, dirt, bacteria and bloodborne pathogens while maintaining sewn seam integrity
- **Snow and rain** – tape designed to keep the wearer dry in all kinds of inclement weather

Our sales and engineering teams will assist in selecting the proper seam sealing tape or design a tape for your application. We can help to determine the optimum seam sealing parameters to maximize the efficiency of your current seam sealing equipment using our tape. We can also assist in procuring seam sealing machines from PFAFF, USA. Donaldson and PFAFF have engineered a seam sealing machine that is extremely efficient. The PFAFF seam sealing machine is available equipped with a conventional slanted post or the vertical post preferred by some for high speed manufacturing.
